SKILLS

Frontend

- React
- JavaScript (ES6+)
- HTML5
- CSS3
- Tailwind CSS
- React Router
- Context API

Backend

- Node.js
- Express.js
- REST APIs
- Middleware
- Zod & express-validator

Auth & Security

- JWT & refresh tokens
- bcrypt
- Role-based access control
- Rate limiting

Databases

- MongoDB
- Mongoose
- Firebase Auth & Firestore

Tools

- Git & GitHub
- Postman
- VS Code
- Vite
- Vercel

PROFILE

Full Stack MERN Developer who builds complete web applications, from responsive React interfaces to secure Node.js, Express and MongoDB APIs. My projects include a football club management platform with role-based dashboards and 182 API endpoints, a banking application with atomic money transfers, and a live e-commerce storefront. I care about clean API design, secure authentication, validation and interfaces that work well on every screen size. Graduate of SQI College of ICT (Professional Diploma in Software Engineering).

PROJECT EXPERIENCE

Saki Stars FC

Football Club Management Platform

Stack: React, Vite, Tailwind CSS, Node.js, Express, MongoDB, Mongoose, Zod, JWT, Cloudinary

 github.com/abdulrasheed-ayomide/saki-stars-fc

- Built a full-stack platform that combines a public club website, a Player Portal and a permission-based Staff Dashboard, backed by a REST API of 182 endpoints across 24 Mongoose models.
- Implemented JWT authentication with short-lived in-memory access tokens and hashed refresh tokens that rotate on every use; reusing an old token revokes the whole session family.
- Designed role, permission and scope-based authorisation enforced on the server for every staff request, with denied attempts recorded in an audit log.
- Modelled seasons, teams, competitions, fixtures and match results with automatically calculated league standings, plus news publishing, media galleries, scouting reports and player/staff applications.
- Protected player data with a four-tier privacy classification and separate serializers per tier, and validated every request with Zod and per-route rate limits.

Spring Financial Bank

Banking / Fintech Application (portfolio project)

Stack: React, Vite, React Router, Axios, Node.js, Express, MongoDB, Mongoose, JWT, bcrypt

- Built a digital banking simulation with a React client and an Express/MongoDB API: registration with email OTP verification, login, password reset, account dashboard, transfers, notifications and an admin area.
- Made peer-to-peer transfers atomic using MongoDB multi-document transactions with a guarded balance update that prevents concurrent overdrafts; every transfer is confirmed with a transaction PIN.
- Implemented access tokens with httpOnly refresh cookies rotated on every use; the Axios client refreshes an expired token and retries the request automatically.

CURRENTLY LEARNING

Technologies I am actively learning and practising.

- MySQL
- SQLite
- Swagger / OpenAPI

PROJECT EXPERIENCE (CONTINUED)

Spring Financial Bank (continued)

- Added separate login and PIN lockouts (5 attempts / 15 minutes), bcrypt hashing for passwords, PINs and OTPs, audit-logged admin sign-ins and rate-limited sensitive endpoints.

Portfolio project; not a real or regulated financial institution.

Natural Blackstrap Molasses

E-commerce Storefront

Stack: React, Vite, Tailwind CSS, React Router, Context API, Framer Motion

molasses-shop.vercel.app

github.com/abdulrasheed-ayomide/natural-blackstrap-molasses

- Built a live, responsive storefront for a natural-products business with product search, category filters, detail pages, reviews and a cart that persists between visits.
- Created a WhatsApp checkout that builds and URL-encodes a full order summary, so customers can order without a payment gateway or backend.

ADDITIONAL PROJECTS

PrimeLane · E-commerce Web App · JavaScript (ES modules), Tailwind CSS, Firebase Authentication, Cloud Firestore

primelane-wr.vercel.app

github.com/abdulrasheed-ayomide/primelane-ecommerce-level2

Built a responsive shop in vanilla JavaScript (ES modules) and Tailwind CSS with product browsing, cart and checkout, plus an admin dashboard.

Adeshina Plumbing · Service Business Website · HTML, Tailwind CSS, JavaScript, GitHub Pages

abdulrasheed-ayomide.github.io/plumbing-service-website

Built and deployed a mobile-first website for a plumbing business with a services showcase, work gallery and direct call and WhatsApp contact.

WORKFLOW & PRACTICES

- Version control with Git and GitHub; frontends deployed to Vercel and GitHub Pages.
- Test APIs with Postman and automated tests (105 server tests on Saki Stars FC), and check layouts across screen sizes.
- Keep secrets in environment variables, validated at start-up and never committed to source control.
- Use AI-assisted development tools, reviewing and testing all generated code before it is used.

EDUCATION

SQI College of ICT

Aug 2025

Professional Diploma in Software Engineering

- Completed a practical software engineering programme covering front-end and back-end web development, algorithms and software testing.
